

From the Battle Lab to the Battlefield

Bridge the gap between the briefing room and the battlefield.
With **SPHERA,** your UAV and robot operators don't just simulate operation, they rehearse reality in any scenario.
Whether training solo or as a synchronized unit, they connect actual control units to a precise digital twin to build muscle memory before hitting the field. **Any Mission. Any System. Zero Risk.**

Why SPHERA?

Any Battlefield

Simulate scenarios anytime, in any weather, in any location. Use aerial imagery of real-world mission zones to prepare for the exact arena you'll face, without logistical constraints.

No Limitations

Master performance individually or as a team. From basic skill-building to complex missions, synchronize your entire unit to train together within the same scenario simultaneously.

Zero Risk

Reduce crashes and hardware damage. Master operational proficiency without real-world risk

Precision Analysis

Advanced Tactical Debriefing
Relive every second of the mission from multiple angles. Use high-fidelity replays to analyze decision-making and performance, transforming every training session into an in-depth learning experience.

Measured. Scored. Mission-Ready.

Replace subjective guesswork with objective data. Use standardized testing to score operator skills, ensuring every operator meets your highest operational standards.

Ultimate Privacy

SPHERA is installed locally and operates without any internet connection. Your data never leaves the room, eliminating cloud risks and external tracking for your sensitive operations.
